FIFTH SCHEDULE

(Section 48C(1)(a))

Annual Fiscal Balance to be Maintained

The fiscal balance requirement is to be calculated as follows:

$$d_t = \frac{1}{1+n_t} d_{t-1} - fb_t$$

where d_t is the public debt at the end of period t as a ratio of the gross domestic product (GDP) in period t , fb_t is the fiscal balance in period t as a ratio of GDP in period t , and n_t is the nominal GDP growth rate between periods $t-1$ and t .

The public debt target, represented as d^* and the number of years (N) required to achieve that ceiling, as specified in 48C(1)(b) or pursuant to a suspension on the grounds specified in 48C(2), determines the fiscal balance target fb^* required over the period N .

$$fb^* = \frac{-n}{(1+n)((1+n)^N - 1)} ((1+n)^N d^* - d_0)$$

The long-run nominal GDP growth rate is represented by n and the initial level of debt-to-GDP ratio is represented by d_0 .

The fiscal balance target referred to in 48C(1)(a) depends on the target date to achieve the debt ceiling and average economic growth, conditional on the initial level of debt.”.
